EDUCATION

University of Warwick

2026-

PhD in Mathematics

- Focusing on geometric group theory, supervised by Dr. Ric Wade.

University of St Andrews

2022-2026

MMath Pure Mathematics

- Honours average: 18.9/20 (The threshold for a first class is 16.5/20)
- Final year project 'Model Theory and Groups', supervised by Prof. Nik Ruskuc.
- Achieved top grades in Discrete Geometry and Advanced Group Theory.

AWARDS

- Arthur Hinton Read memorial prize (for the top grades in final year)- £500 2026
- StARIS Summer research bursary (primarily based on exam results)- £2,500 * 2025
- StARIS Martinmas semester research bursary- £250 ** 2025
- Dean's list award (For a first class average) 2023, 2024, 2025, 2026

PAPERS

The set of interpolating functions is nowhere dense in $(C(\mathbb{R}), d)$, [arXiv:2602.06752](#)

Joint work with Prof. Lars Olsen and Nathaniel Strout. We will be submitting to the Real Analysis Exchange.

The following is currently in preparation:

Centralizers in Röver's Group

Joint work with Prof. Collin Bleak and Teiva Jabbour.

RESEARCH EXPERIENCE

All research detailed below has been undertaken at University of St Andrews. For funded projects I have indicated from which award the funding comes.

Funded Research Project **

Martinmas Semester 2025

Supervisor: Dr. Thomas Coleman

- Investigated MB-homogeneous relational structures. Showed, using results of Cherlin and Coleman, that there exist uncountably many directed graphs which are MB-homogeneous but not homogeneous.

Funded Summer Research Project *

Summer 2025

Supervisor: Dr. Collin Bleak

- Classified element centralizers in Röver's Group, extending some of the techniques which were used to classify centralizers in Thompson's Group V .

- Interacted with research by Aroca, Belk, Matucci, Tarocchi on the conjugacy problem in Nekrashevych Groups. Featured in the acknowledgements of Tarocchi's recent preprint on certain topological full groups (arXiv:2508.02582).

Independent Study Module

Candlemas Semester 2025

Supervisor: Prof. Lars Olsen

- Proved topological and measure-theoretic properties of a set of certain pathological functions. Also rewrote proofs of results in shyness and lineability, with the aim of improving readability for a wider audience.
- It is very rare for students to do independent study modules, requiring special permission from their supervisor, advisor of studies, and the director of teaching.

Summer Research Project

Summer 2024

Supervisor: Prof. Peter Cameron

- Studied covers of sets of finite groups, trying to extend results from the main paper on the topic by Cameron, Craven, Dobson, Harper, Sambale. In particular focusing on p -groups for p prime.

TALKS AND CONFERENCES

Final Year Project Talk

I discussed the first-order theory of groups, with a view towards ω -categoricity.

Penultimate Year Talk

I gave a talk on constructivism and intuitionism, with a focus on the controversy that followed Hilbert's proof of his basis theorem.

Conferences Attended

I have attended the following conferences/seminars:

- 15th Ukraine Algebra Conference (Online)
- NBSAN St Andrews Conference 2025
- University of Milano-Bicocca Algebra Seminar (Online)

I regularly attended the following seminars/colloquia in University of St Andrews:

- Geometry Research Group Seminar
- Pure Mathematics Colloquium

TUTORING

Second Year Analysis

2025

- Tutored two students in the second year analysis module MT2502. I helped them understand convergence of sequences and series, continuity, differentiability, as well as some of the basic tricks in analysis.

NON-MATHEMATICAL INTERESTS

Ultra Running I have run a 100km ultramarathon, and hope to run the Fife Coastal Path in 2026.
Bouldering I have recently enjoyed a lot of (indoor) climbing.
